

KIT2017: Vienna, Austria

Oct 12, 2017 | 9:00 AM - 5:00 PM

KIT2017: Vienna, Austria (<https://ec.kemet.com/kit-events/kit2017-vienna>)

Agenda

Capacitor Design & Characteristics

For each component type we will discuss the materials used in the design, how differences in construction techniques affect their performance, and important characteristics to consider in your design.

- Ceramic Capacitors
- Polymer Capacitors
- Tantalum Capacitors
- Film X&Y and Power Film Capacitors
- AC Line Filter
- Aluminum Electrolytic Capcaitors
- Filters

Application Areas

Applying the information learn in the previous sections, discussions focus on how to apply those characteristics to real-world applications.

- Parasitics in Capacitors
- Dielectric Comparison
- X2 Suppression Capacitors
- AC Line Filters
- Self Heating
- Film versus Aluminum Electrolytic Capacitors
- Tantalum Capacitors versus Polymer Capacitors and MLCC's
- K-SIM
- Self Resonance Frequency
- End of Life Calculations
- Filters and Power Factor Correction
