

Features

Power Module

- Buck regulator power module with integrated shielded inductor
- 36VDC input voltage, 4A output current
- Programmable output voltage: 1 to 7V
- Ultra-high power density: 5.0 x 5.5mm QFN footprint
- Enable, power good, soft start
- Flip-chip technology for improved thermal behavior
- UVLO, SCP, OCP, OTP

RECOM
DC/DC Converter

RPX-4.0

4.0 Amp QFN Package

Description

The RPX-4.0 is a buck converter with an integrated inductor in a compact 5mm x 5.5mm x 4.1mm thermally-enhanced QFN package. The input range is from 3.8 to 36VDC, allowing 5V, 12V, or 24V supply voltages to be used. The output voltage can be set with two resistors in the range from 1 up to 7VDC. The output current is up to 4A and is fully protected against continuous short-circuits, output overcurrent, or over-temperature faults, making the device particularly suitable for industrial automation, test and measurement, portable devices, and high density or weight-sensitive applications.

Selection Guide

Part Number	Input Voltage Range [VDC]	Output Voltage [VDC]	Output Current max. [mA]	Efficiency typ. [%]
RPX-4.0	3.8 - 36	1 - 7	0 - 4000	87

Notes:

Note1: Efficiency tested at $+V_{IN} = 24VDC$, full load and $V_{OUT} = 5VDC$

Model Numbering

RPX-4.0-

Output Current ————— Packaging ⁽²⁾

Notes:

Note2: add suffix “-R” for tape and reel packaging

add suffix “-CT” for bag packaging (refer to “**PACKAGING INFORMATION**”)

Specifications

ABSOLUTE MAX RATINGS (exceeding these ratings may damage the device)

Parameter	Conditions	Min.	Typ.	Max.
Absolute Maximum Voltage	$+V_{IN}$ to $-V_{IN}$	-0.3VDC		38VDC
	CTRL to GND	-0.3VDC		38.3VDC
	FB to GND	-0.3VDC		5.5VDC
	PG to GND	-0.1VDC		18VDC
	GND to $-V_{IN}$	-0.3VDC		0.3VDC
	V_{OUT} to $-V_{IN}$	-0.3VDC		7VDC
	PGS to $-V_{IN}$	-0.3VDC		5.5VDC

EVAL
BOARD
available

www.recom-power.com/eval-ref-boards

Specifications

Parameter	Conditions	Min.	Typ.	Max.
Junction Temperature ⁽³⁾		-40°C		+125°C
Lead Temperature				+240°C
Storage Temperature		-55°C		+150°C
Maximum number of reflows				3
Mechanical Shock	MIL-STD-883D, Method 2002.3, 1msec, 1/2 sine, mounted			500G
Mechanical Vibration	MIL-STD-883D, Method 2007.2, 20 to 2000 Hz			20G

Notes:

Note3: The ambient temperature is the air temperature of the surrounding environment. The junction temperature is the temperature of the internal power IC when the device is powered. Operating below the maximum ambient temperature, as shown in the "**Safe Operating Area**" ensures that the maximum junction temperature of any component inside the module is never exceeded.

OPERATING CONDITIONS ($+V_{IN} = 12\text{VDC}$, $T_{AMB} = +25^\circ\text{C}$, unless otherwise noted)

Parameter	Condition	Min.	Typ.	Max.
Input Voltage Range ⁽⁴⁾		3.8VDC		36VDC
Under Voltage Lockout	DC-DC ON, $V_{OUT} = 2.5\text{VDC}$, $I_{OUT} = 0\text{A}$ DC-DC OFF, $V_{OUT} = 2.5\text{VDC}$, $I_{OUT} = 0\text{A}$		3.12VDC 2.62VDC	
Input Capacitance		2x 10μF X5R or X7R		
Output Capacitance	refer to " OUTPUT VOLTAGE SETTING "	26μF		1000μF
Output Voltage Range	refer to " Safe Operating Area "	1VDC		7VDC
Output Current Range	@natural convection, $T_{AMB} = 25^\circ\text{C}$	0A		4A
Standby Current	DC-DC OFF		5μA	10μA
Feedback Voltage ⁽⁵⁾	@ no load, form $V_{OUT} + V_{DROP}$ to max $+V_{IN}$	0.985VDC	1.0VDC	1.015VDC
Load Regulation	0-100% load, $T_{AMB} = +25^\circ\text{C}$		±0.40%	
Line Regulation			0.15%	
Internal Soft Start Time			5ms	
Output Ripple and Noise ⁽⁵⁾	20Mhz BW		30mVp-p	

Notes:

Note4: The recommended minimum $+V_{IN}$ is 3.8VDC or $(V_{OUT} + 1\text{VDC})$, whichever is greater. Refer to "**Safe Operating Area**"

Note5: The overall output voltage tolerance will be affected by the tolerance of the external R_{FB1} and R_{FB2} resistors.

Typical Application

Below is a design example following the application guidelines for the specifications below.

Design parameter: $+V_{IN} = 24\text{VDC}$, $V_{OUT} = 5\text{VDC}$, $I_{OUT} = 4\text{A}$

Recommended Values			
C_{IN} [μF]	R_{FB1} [Ω]	R_{FB2} [Ω]	C_{out} [μF]
2x 10μF	10k	2k49	2x 47μF

Specifications

Safe Operating Area

CTRL OPERATING CONDITIONS

Parameter	Condition	Min.	Typ.	Max.
CTRL ON/OFF	V _{CTRL} ON	0VDC		36VDC
	STANDBY	>1.20VDC	1.23VDC	1.26VDC
	OFF		0.3VDC ≤ V _{CTRL} ≤ 1VDC	<0.3VDC
	V _{CTRL-HYS}		100mV	
CTRL Input Current ⁽⁶⁾	+V _{IN} = 12VDC, V _{FB} = 1.5VDC, V _{CTRL} = 2VDC		1.4nA	200nA

Notes:

Note6: CTRL is a digital control pin that turns the module on and off.

Drive CTRL high to turn on the module; drive CTRL low to turn it off

Enabling the device

Typical enable control

Specifications

OUTPUT VOLTAGE SETTING

A resistor divider connected to the FB pin (pin 9) sets the output voltage of the RPX-4.0. The output voltage adjustment range is from 1VDC to 7VDC. The graph below shows the feedback resistor connections for setting the output voltage. The recommended value of R_{FB1} is 10k Ω . Use the equation to calculate the value for R_{FB2} . The table below lists the standard resistor values for several output voltages. The capacitance values listed represent the effective capacitance, taking into account the effects of DC V_{CC_ext} and temperature variation.

V_{OUT_set} = trimmed output voltage [VDC]

R_{FB1} = resistor (10k) [Ω]

R_{FB2} = calculated resistor [Ω]

Calculation:

$$R_{FB2} = \frac{10}{(V_{OUT} - 1)} k\Omega$$

Component Values

V_{OUT_set} [VDC]	R_{FB2} [Ω]	C_{OUT} [μF]
1.0	open	150
1.1	100k	143
1.2	49k9	132
1.3	33k2	123
1.4	24k9	115
1.5	20k	107
1.8	12k4	91
2.0	10k	82
2.5	6k65	67

Component Values

V_{OUT_set} [VDC]	R_{FB2} [Ω]	C_{OUT} [μF]
3.0	4k99	57
3.3	4k32	52
4.0	3k32	43
4.5	2k87	39
5.0	2k49	35
5.5	2k21	32
6.0	2k	30
6.5	1k82	28
7.0	1k65	26

POWER GOOD OPERATING CONDITIONS

Parameter	Condition	Min.	Typ.	Max.
PG Pull Up Voltage		0VDC		7VDC
PG Thresholds	Ovoltage Undervoltage			
PG Low Voltage	0.5mA pull-up V_{CTRL} = 0VDC		0.2VDC	
Minimum $+V_{IN}$ for valid PG	50 μ A pull-up V_{CTRL} = 0VDC, $T_J=T_A=+25^\circ C$		2VDC	

The RPX-4.0 has a built-in power-good signal (PG) which indicates whether the output voltage is within its regulation range. The PG pin is an open-drain output that requires a pull-up resistor to a nominal voltage source of 18VDC or less. The internal 5-V LDO output (PGS pin), can be used as the pull-up voltage source. A typical pull-up resistor value is between 10k Ω and 100k Ω . The maximum recommended PG sink current is 3mA. Once the output voltage rises above 94% of the set voltage, the PG pin rises to the pull-up voltage level. The PG pin is pulled low when the output voltage drops lower than 92% or rises higher than 107% of the nominal set voltage.

Pad Information

Pad #	Function	Description
12	GND	Analog ground. This pin must be connected to $-V_{IN}$ at a single point. See the layout section.
4, 5	DNC	Do not connect. Must be soldered to an isolated pad.
2	CTRL	CTRL pin. Do not float. Connected directly to $+V_{IN}$ when not used.
9	FB	Feedback input. Used to set output voltage between 1 and 7V.
3, 10, 11	NC	Not connected. Connect to $-V_{IN}$ plane for enhanced EMC and thermal performance.
15	$-V_{IN}$	System ground. Reference ground of the regulated output voltage. Connect to input supply return, load return, and input and output capacitors.
6	PG	Power good output
1, 14	$+V_{IN}$	Input supply voltage. Connect using wide PCB traces. Requires C_{IN} between these pins and $-V_{IN}$ close to the pins.
7, 8	V_{OUT}	Output voltage. Connect external output capacitors between this pin and $-V_{IN}$ close to the pins
13	PGS	Power Good Source. Should only be used as logic supply for PG pin.

Specifications

Recommended Footprint (Top View)

SOLDERING

Wave or Re-flow etc.

Profile Feature	PB-Free Assembly
Preheat	
minimum Temperature (TS_min)	155°C
maximum Temperature (TS_max)	240°C
Time (tS)	100s-300s
Liquids	
Temperature (TL)	217°C
Time (tL)	30-60s
Peak Temperature (TP)	240°C
Time remaining around Peak Temperature	10s
max Ramp Down Rate (from Ts_max to TP)	5°C/s
max Ramp Up Rate	3°C/s
max time from 25°C to Peak Temperature (TP)	8min

- 1 Pb-Free assembly is recommended according ro JEDEC J-STD020.
- 2 Ensure that the peak re-flow temperature does not exceed 240°C as per JEDEC J-STD020
- 3 The re-flow time period during peak temperature of 240°C should not exceed 30 seconds.
- 4 Re-flow time above liquids (217°C) should not exceed 150 seconds.
- 5 For solder paste use a standard SAC Alloy such as SAC 305, type 3 or higher.
- 6 Other soldering methods (e.g. vapor phase) are not verified and have to validate by the customer on his own risk.

Solder Profile

Specifications

PCB LAYOUT SUGGESTION

Layout Considerations:

1. Large copper for power planes ($+V_{IN}$, V_{OUT} , and $-V_{IN}$) for enhanced thermal performance.
2. Input and output capacitors should be placed as closely to the pins as possible.
3. Connect GND to $-V_{IN}$
4. Place R_{FB1} and R_{FB2} as close as possible to the FB pin.
5. Use multiple vias to connect the power planes to internal layers.
