Fast Track

Fast Track by 8devices is a product design program that enables our customers to reach the product launch stage faster by leveraging our experience and know-how.

From prototype design, testing, certification to mass production, we will assist you to ensure quick time to market and high-quality engineering.

Stages:

1. Consultation

- Signing NDA - protects from the disclosure of intellectual property

- Project discussion - purpose, problems and idea discussions

- Action planning - goals and targets setting, clarity of direction

2. Prototype development/ review (Idea initiation)

- Customization - module motherboard customization, option to create a custom design for high volume projects.

- Hardware review - ability to review hardware, which reduces the number of hardware revisions

- Software customization - review, consultation, and software development services

- Prototype manufacturing - modern in house manufacturing facility allows quick and flexible production

3. Testing

- RF Calibration
- EMC pre-scans
- Temperature and aging testing
- Pre and post-production testing
- Software testing and automation

4. Certification

- CE (RED), FCC, IC, Telec, etc. Certifications
- A large network of certified labs in Asia

5. Production

- In-house small and medium batch size production services
- Trusted EMS partners in Asia for large scale projects
